@jasongfleischer

# This sucks

archived version of my Documents folder from ~ 2012

Several months after finishing a writing project, I wanted to keep only the final version of the many different revisions... figuring out which one was the version actually sent to the publisher was hard!

# Yup, this sucks too.

May 11

Thanks for chatting with me earlier today. I added the link to the visualization project into my resume and attached the resume. Thanks for any connections you can make for me. I'd love to know where you send it, so I can keep track of that. Thanks again!

Best,

May 11

Actually, please use this one. I fixed a typo that was previously missed. Thanks!

[REDACTED]

May 11

Final copy, I swear. Thanks for helping out.

[REDACTED]

# This is a step in the right direction

SDSS Teacher Workshop

Considering how to incorporate data science into your high school STEM classroom?

The goal of this workshop is for you to leave with data science skills and applicable examples that can be used in your classroom.

The goal of this workshop is for you to leave with data science skills and applicable examples that can be used in your classroom.

This workshop will answer questions like --

- What is data science?
- How can high schoolers prepare for data science courses in college?
- What does a career in data science involve?

isues answer questions like --

- What is data science?
- How can high schoolers prepare for data science courses in college?
- What does a career in data science involve? what data science is, what high schoolers can do to best prepare for data science courses in college, and what a career in data science involves.

•

We will walk through how data scientists carry out projects using RStudio, introduce the basics of the R programming language, and work with real datasets to generate visualizations and analyze data. The goal of this workshop is for you to leave with data science skills and applicable examples that can be used in your classroom.

# Version Control

- Enables multiple people to simultaneously work on a single project.
- Each person edits their own copy of the files and chooses when to share those changes with the rest of the team.
- Thus, temporary or partial edits by one person do not interfere with another person's work

What is version control?

A way to manage the evolution of a set of files

# What is version control?

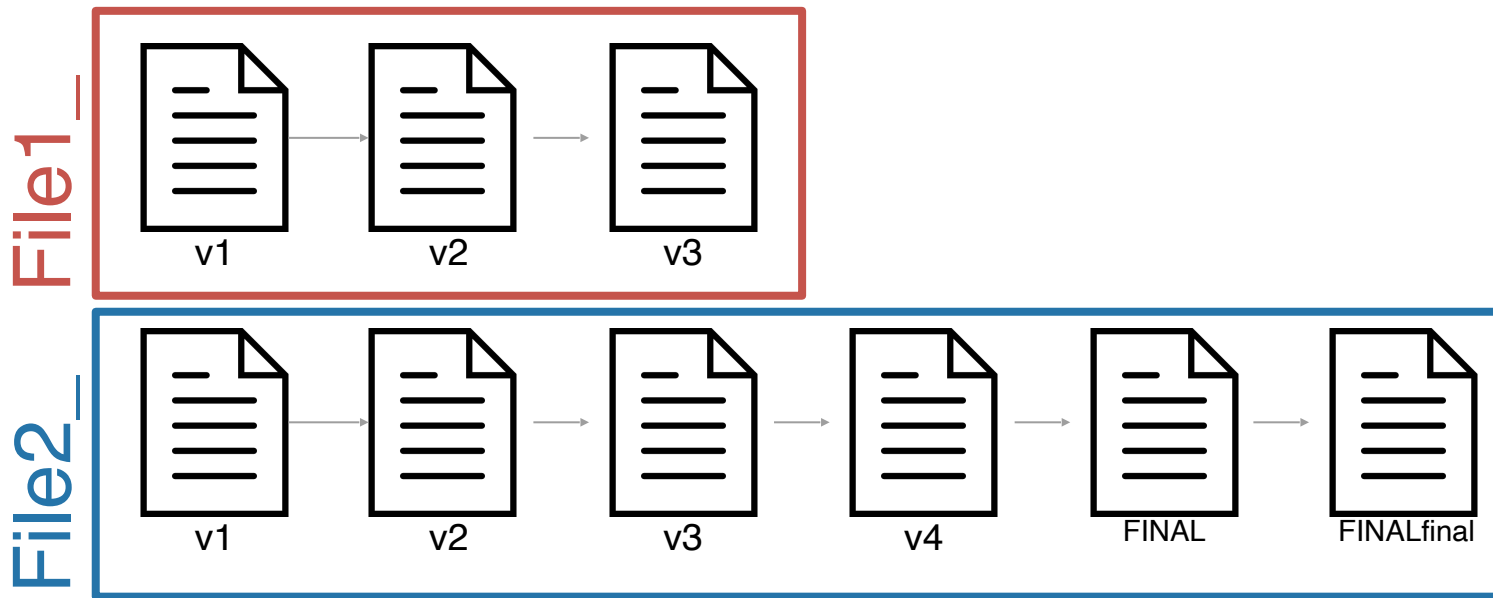

## A way to manage the evolution of a set of files

# What is version control?

## A way to manage the evolution of a set of files

# What is version control?

## A way to manage the evolution of a set of files

File1

File2

When using a version control system, you have **one copy of each file** and the *version control system tracks the changes* that have occurred over time

# What is version control?

## A way to manage the evolution of a set of files

The set of files is referred to as a **repository (repo)**

# git & GitHub

# git

the version control system

~ Track Changes  
from Microsoft  
Word....on  
steroids

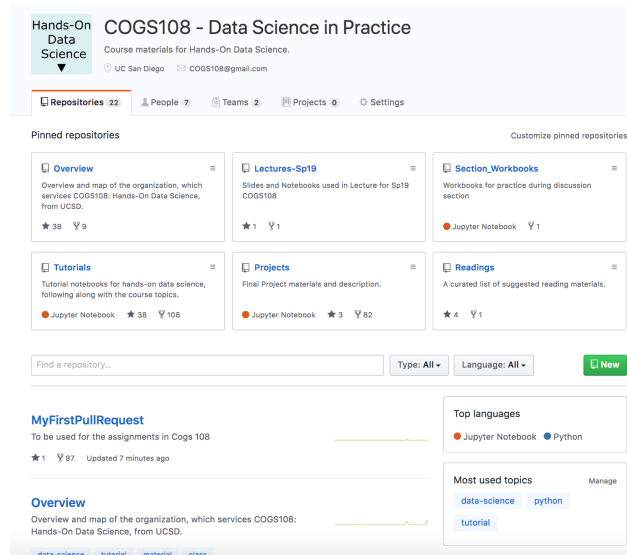

**GitHub** (or Bitbucket or  
GitLab) is the home **where**  
**your git-based projects live**  
on the Internet.

~ Dropbox....but  
way better

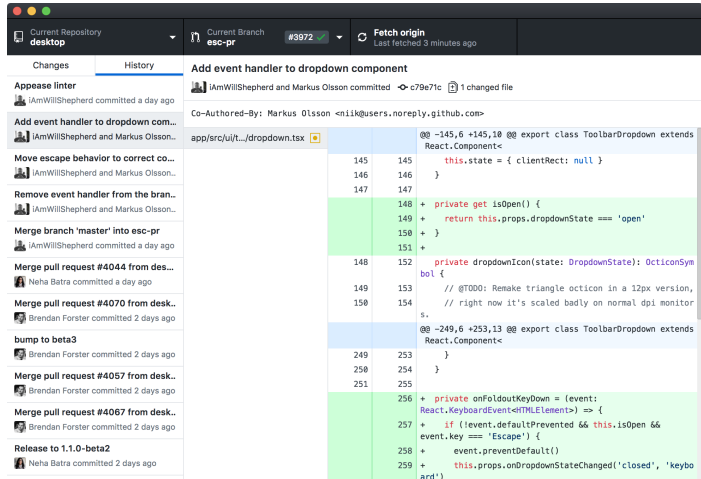

# What version control looks like

```
$ git clone https://www.github.com/username/repo.git
$ git pull
$ git add -A
$ git commit -m "informative commit message"
$ git push
```

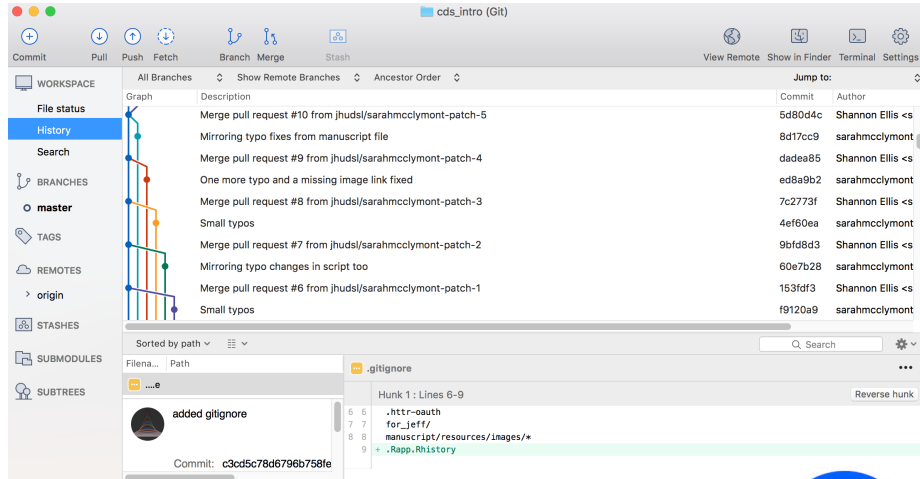

Terminal  
**git**

# GUIs can be helpful when working with version control

GitHub Desktop

SourceTree

<https://forms.gle/8UeUL2Ux4YtG2CVr8>

# Version Controller

How do you typically interact with git?

A. I don't

B. command line

C. GUI GitHub Desktop

D. GUI: SourceTree

E. GUI: other

# Why version control with git and GitHub?

Collaboration

Returning to  
a safe state

Exposure  
for your  
work

Tracking  
others' work

# Collaborate like you do with Google Docs

Collaboration

# Make changes locally, while knowing a stable copy exists

Returning to  
a safe state

You're free and safe to **try things out locally**. You'll only send changes to the repo when you're at a stable point

# Your repositories will be visible to others!

Exposure  
for your  
work

Your public GitHub repos  
are your coding social  
media

# Keep up with others' work easily

Tracking  
others' work

As a social platform, you  
can see others' work too!

A **GitHub repo** contains all the files and folders for your project.

GitHub is a **remote host**. The files are geographically distant from any files on your computer.

clone →

When you first make a copy onto your local computer (read: laptop), you **clone** the repository.

repo

clone

clone

If someone else on your project cloned the repo at the same time, you would have identical copies of the project on each of your computers.

Yay! Everyone can  
work on the project!

repo

You decide you want to  
change some of the text  
in the project.

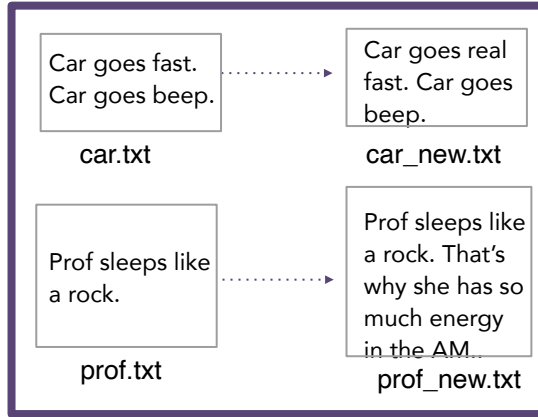

repo

You decide you want to  
change some of the text  
in the project.

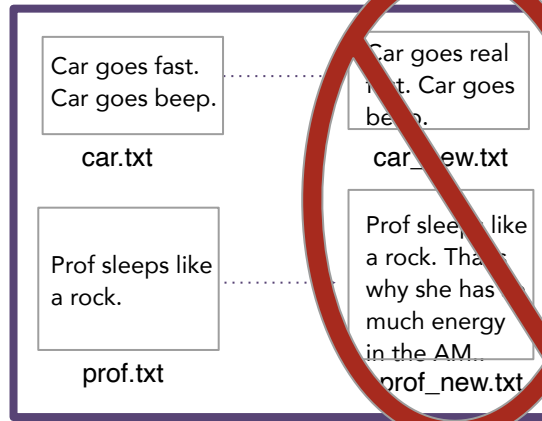

repo

without git...you'd likely rename these files....

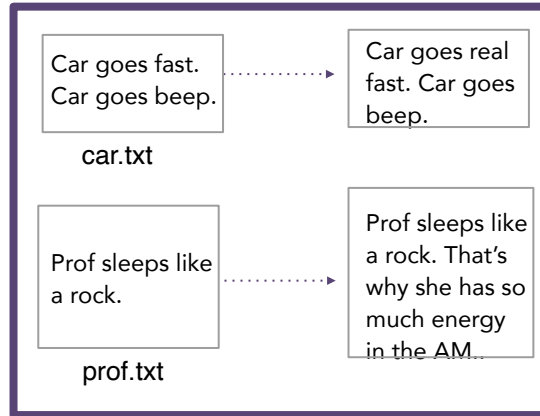

repo

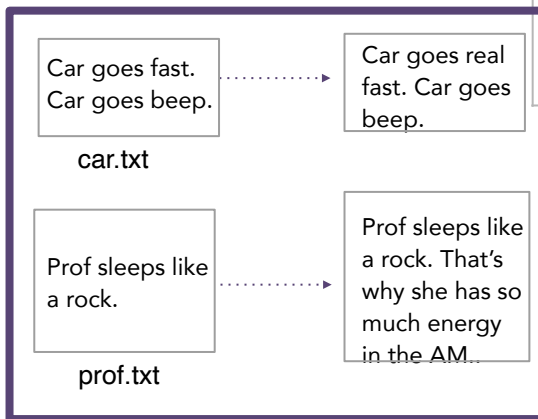

Thank  
goodness those  
days are over!

repo

Instead, you tell git which files you'd like to keep track of using **add**. This process is called *staging*.

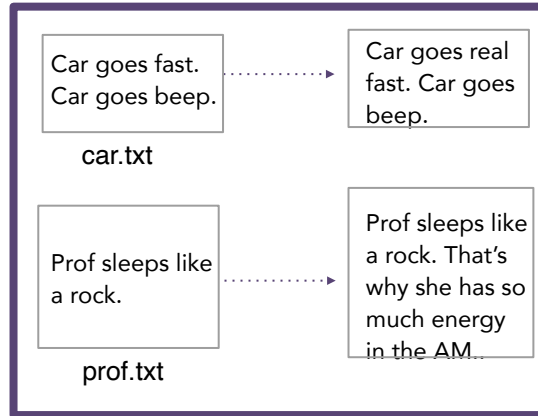

<code>git add file</code>	stages specified file (or folder)
<code>git add .</code>	stages new and modified files
<code>git add -u</code>	stages modified and deleted files
<code>git add -A</code>	stages new, modified, and deleted files
<code>git add *.csv</code>	Stages any files with .csv extension
<code>git add *</code>	Use with caution: stages everything

Instead, you tell git which files you'd like to keep track of using **add**. This process is called *staging*.

repo

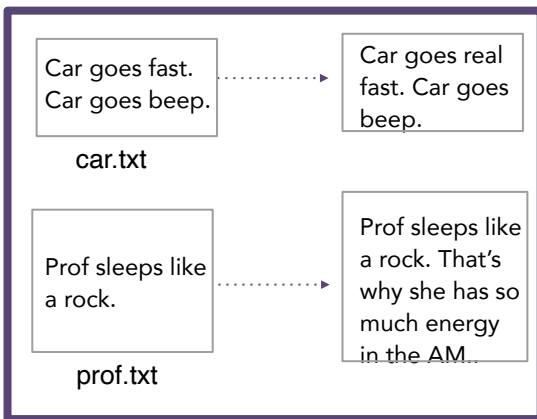

Then, you create a snapshot of your files at this point. This snapshot is called a **commit**.

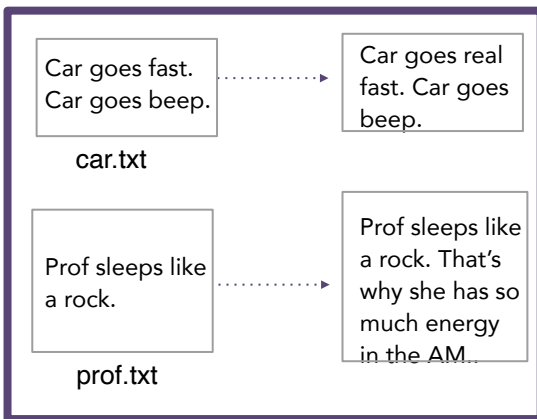

repo

Then, you create a snapshot of your files at this point. This snapshot is called a **commit**.

A **commit** tracks  
who, what, and  
when

You can make commits more informative by adding a **commit message**.

Example: `git commit -m 'fix typos in car and prof'`

Then, you create a snapshot of your files at this point. This snapshot is called a **commit**.

A **commit** tracks who, what, and when

repo

## Surveys - thank you! (N=459)

- 90% have reliable internet
- 71% comfortable in Python; 9.4% not comfortable in any language
- Comfort in stats: 5.8/10
- Comfort in programming: 6.8/10
- Common hobbies: TV/movies/YouTube, video games, photography, walks/hikes, outdoor activities/hiking, music, journaling, etc.

What are you hoping to get out of COGS 108?

344 responses

deeper understanding of coding

I am hoping to learn how to perform data analysis with Python.

I'm hoping to understand more about what it means to do a data science project compared to other projects I've done beforehand.

I hope to be more comfortable in programming and be able to solve problems.

I hope I can survive.

An understanding of data science to see if I want to take more COGS classes, and a CSE elective

I am hoping to gain valuable hands on experience when it comes to creating an actual data science project. I hope that this class can give me proper guidance so I can feel comfortable to start more data science projects in my own time.

A basic understanding of Data Science and its applications in various fields

Review & Question Time

---

# Version Controller I

<https://forms.gle/wHA2GSyuycFre5qr6>

You've been working with a team on a project in a repo. You've made changes locally and you want to see them on the remote.

**What do you do to get them on the remote?**

## Version Controller II

<https://forms.gle/wHA2GSyuycFre5qr6>

Your teammate has given you access to a GitHub repository to work on a project together. You want to get them for the first time on your computer locally.

**What do you do to get the repo on your computer?**

repo

Each time you create a commit, git tracks the changes made automatically.

By committing each time you make changes, git allows you to time travel!

By committing each time you make changes, git allows you to time travel!

377dfcd00dd057542b112cf13be6cf1380b292ad

439301fe69e8f875c049ad0718386516b4878e22

456722223e9f9e0ee0a92917ba80163028d89251

There's a unique id, known as a **hash**, associated with each commit.

You can return to the state of the repository at any commit. Future commits don't disappear. They just aren't visible when you **check out** an older commit.

377dfcd00dd057542b112cf13be6cf1380b292ad

But...not everything is always linear.  
Sometimes you want to try something out  
and you're not sure it's going to work.  
This is where you'll want to use a **branch**.

It's a good way to experiment. It's pretty easy to get rid of a branch later on should you not want to include the commits on that branch.

But...what if you DO want to include the changes you've made on your try-something-cool branch into the **main** branch?

repo

What if someone else is working on something cool and you want to play around with it? You'll have to **fork** their repo.

After you fork their repo, you can play around with it however you want, using the workflow we've already discussed.

But what if you think you've found a bug in their code, a typo, or want to add a new feature to their software? For this, you'll submit a **pull request** (aka **PR**).

But what if you think you've found a bug in their code, a typo, or want to add a new feature to their software? For this, you'll submit a **pull request** (aka **PR**).

someone  
else's  
repo

Last but not least...what if you find a bug in someone else's code OR you want to make a suggestion but aren't going to submit a suggestion with a PR. For this, you can file an **issue** on GitHub.

someone  
else's  
repo

Last but not least...what if you find a bug in someone else's code OR you want to make a suggestion but aren't going to submit a suggestion with a PR. For this, you can file an **issue** on GitHub.

**Issues** are *bug trackers*.

While, they can include bugs, they can also include feature requests, to-dos, whatever you want, really!

They can be assigned to people.

They can be closed once addressed ....or if the software maintainer doesn't like the suggestion

One more git recap...

someone  
else's  
repo

fork →

  
your  
GitHub

You can work on others' repos by first **forking** their repository onto your GitHub

One more git recap...

fork →

You can work on others' repos by first **forking** their repository onto your GitHub

**Pull requests** allow you to make specific edits to others' repos

**Issues** allow you to make general suggestions to your/others' repos

One more git recap...

Review & Question Time

---

# Version Controller III

<https://forms.gle/eyxgHB3wvqmy17uR9>

To experiment within your own repo (test out a new feature, make some changes you're not sure will work)...

what should you do?

# Version Controller IV

<https://forms.gle/eyxgHB3wvqmy17uR9>

If you've made edits to someone else's repo that you're not a collaborator on...  
what would *they* have to do to incorporate your changes?

# Jupyter notebooks suck to version control

<https://nextjournal.com/schmudde/how-to-version-control-jupyter>

## ReviewNB

ReviewNB is a GitHub app that also offers visual diffing with an interface that looks similar to the traditional Jupyter IDE. Because the outputs are visualized, problems associated with committing binary blobs disappear.

```
1 housing.plot(kind="scatter", x="longitude", y="latitude", alpha=0.8,  
2 s=housing['population']/88, label="Population", figsize=(6,8),  
3 c="median_house_value", cmap=plt.get_cmap("jet"), colorbar=True,  
4 sharex=False)  
5 plt.legend()  
6 save_fig("housing_prices_scatterplot")
```

Saving figure housing\_prices\_scatterplot

```
1 housing.plot(kind="scatter", x="longitude", y="latitude", alpha=0.8,  
2 s=housing['population']/28, label="Population", figsize=(10,8),  
3 c="median_house_value", cmap=plt.get_cmap("jet"), colorbar=True,  
4 sharex=False)  
5 plt.legend()  
6 save_fig("housing_prices_scatterplot")
```

Saving figure housing\_prices\_scatterplot

Note: You're encouraged to put projects on GitHub.

Please do not put assignments on GitHub.

## Version Control: Practice

- Discussion Lab 1: Part 3
- Assignment 1: Part 1
  - This will get you practice with git & GitHub
  - Understand what you're doing in the assignment!
  - You may have to google, ask others, spend some time with this!
  - Part II is a Python review; each part of this assignment is self-contained
  - Do this part of the assignment ASAP
- git & Github == How to get the course lectures/materials
  - Assignment 1 will have you fork the Lectures and Project repos
  - You can [keep the lectures up-to-date](#) throughout the quarter
- you'll be using GitHub for your final projects

# COGS 108 Final Projects

---

The COGS 108 Final Project will give you the chance to explore a topic of your choice and to expand your analytical skills. By working with real data of your choosing you can examine questions of particular interest to you.

- You are encouraged to work on a topic that matters to the world (your family, your neighborhood, a state/province, country, etc).
- Taboo Topics: Movie Predictions/Recommendation System; YouTube Data Analysis, Kickstarter success prediction/analysis, prediction of what makes a song popular on Spotify

# Final Project: Objectives

- Identify the problems and goals of a *real* situation and dataset.
- Choose an appropriate approach for formalizing and testing the problems and goals, and be able to articulate the reasoning for that selection.
- Implement your analysis choices on the dataset(s).
- Interpret the results of the analyses.
- Contextualize those results within a greater scientific and social context, acknowledging and addressing any potential issues related to privacy and ethics.
- Work effectively to manage a project as part of a team.

# Upcoming Project Components

Project Review (5%) - Mon of week 3, your group will be assigned a previous COGS 108 project to review; A google Form will be released to guide your thinking/discussion about and review of what a previous COGS 108 group did for their project. (due Fri Week 3)

Project Proposal (9%) - a GitHub repo will be created for your group; 'submit' on GitHub (due Fri Week 4)

# Project Proposal (8%)

Full project guidelines are here:

[https://github.com/COGS108/Projects/blob/master/  
FinalProject\\_Guidelines.md](https://github.com/COGS108/Projects/blob/master/FinalProject_Guidelines.md)
